☐ Level 1, Full Activation. All ESFs are activated.

WATCHES AND WARNINGS:

None at this time

SHELTER INFORMATION:

None at this time

The entire state has been outlined as a **slight risk area for isolated severe weather today and tonight**. The primary threat will be damaging straight line winds with a lower risk of hail and isolated tornadoes. Frequent lightning and heavy downpours resulting in minor flooding will also be possible in stronger storms. Because of this elevated threat for strong thunderstorms, a Severe Thunderstorm Watch has been issued for the western Florida Panhandle this morning and may be issued for areas eastward later today.
